In logic, a many-valued logic (also multi-or multiple-valued logic) is a propositional calculus in which there are more than two truth values. Traditionally, in Aristotle's logical calculus, there were only two possible values (i.e., "true" and "false") for any proposition. Classical two-valued logic may be extended to n-valued logic for n greater than 2.

In ethics, value denotes the degree of importance of some thing or action, with the aim of determining what actions are best to do or what way is best to live (normative ethics), or to describe the significance of different actions. Value systems are proscriptive and prescriptive beliefs; they affect ethical behavior of a person or are the basis of their intentional activities.

Don't use MS Print to PDF; the print stream doesn't have enough information in it to create these navigational aides. Adobe Acrobat DC, as well as several other PDF creation products (Foxit, Nitro, Nuance) use macros that will interpret the styles and the navigation tree in Word to create bookmarks and set the initial view of the PDF to launch with the bookmarks open.
