radar principles for the pdf

Radar is a detection system that uses radio waves to determine the range, angle, or velocity of objects. It can be used to detect aircraft, ships, spacecraft, guided missiles, motor vehicles, weather formations, and terrain. A radar system consists of a transmitter producing electromagnetic waves in the radio or microwaves domain, a transmitting antenna, a receiving antenna (often the same ...

Ground-penetrating radar (GPR) is a geophysical method that uses radar pulses to image the subsurface. This nondestructive method uses electromagnetic radiation in the microwave band (UHF/VHF frequencies) of the radio spectrum, and detects the reflected signals from subsurface structures. GPR can have applications in a variety of media, including rock, soil, ice, fresh water, pavements and ...

4 LIDAR Operational Theory A pulse of light is emitted and the precise time is recorded. The reflection of that pulse is detected and the precise time is recorded. Using the constant speed of light, the delay can be converted into a "slant range" distance. Knowing the position and orientation of the sensor, the XYZ coordinate of the reflective

Light Detection and Ranging (LiDAR)

Un radar Doppler es aquel radar que usa el efecto Doppler en los ecos de retorno de blancos para medir su velocidad radial. Para ser más específico, la señal de microonda enviada por el haz direccional en la antena de radar se refleja hacia el radar y se comparan las frecuencias, arriba o abajo desde la señal original, permitiendo mediciones directas y altamente seguras de componentes de ...
