The absorptivity at 540 nm of bovine hemoglobin cyanide (cyanmethemoglobin) was determined on the basis of the iron content and found to be equal to the established value for human hemoglobin cyanide ($11.0 \text{ L} \cdot \text{mmol}^{-1} \cdot \text{cm}^{-1}$). On this basis the absorption spectra of the common derivatives were determined for bovine hemoglobin.

Spectrophotometry of Hemoglobin: Absorption Spectra of

This publications database includes many of the most recent publications of the National Institute of Standards and Technology (NIST). The database, however, is not complete.

5.1 This is a precise instrumental method giving results having an absolute physical significance without reference to a comparison paint. It should be used when maximum precision and minimum subjectivity are required, as in testing specification coatings or evaluating the hiding efficiency of pigments.

ASTM D2805 - 11(2018) Standard Test Method for Hiding

Fluorescence spectroscopy (also known as fluorimetry or spectrofluorometry) is a type of electromagnetic spectroscopy that analyzes fluorescence from a sample. It involves using a beam of light, usually ultraviolet light, that excites the electrons in molecules of certain compounds and causes them to emit light; typically, but not necessarily, visible light.

Fluorescence spectroscopy - Wikipedia

Construct the relevant standard curves. Integrate all peaks of the chromatograph obtained at 624 nm. If Fast Green FCF is used as the standard, calculate the ratio
